SUMMARY

Product designer specializing in **Human-Centered AI** and **AI interaction architecture**. I design invisible intelligence layers—systems that surface the right information at the moment of decision, give the user a choice, and vanish. CS student at SF State (3.6 GPA, Dean's List) with hands-on experience in end-to-end product design, UX research, and building interactive prototypes. Seeking a product design internship at a team shaping how humans interact with AI.

SKILLS

Design: Product Design, Interaction Design, Information Architecture, Design Systems, Responsive & Mobile Design
Research: User Research, Usability Testing, Journey Mapping, Persona Development, Heuristic Evaluation, A/B Testing
Tools: Figma (Auto Layout, Components, Variants, Prototyping), Miro, Maze, Adobe XD, Qualtrics, Notion
Technical: HTML/CSS/JS, React, Python, Git/GitHub, Vanilla JS, localStorage APIs, Google Identity Services
Methods: Design Thinking, User-Centered Design, Agile/Iterative Design, Cross-functional Collaboration, Design Handoff

EXPERIENCE

Front Office Assistant — Center for Global Engagement
Jan 2026 – Present

San Francisco State University · College of Professional & Global Education

- Promoted to Front Office Student Assistant based on performance; serve as primary point of contact for 200+ international students, handling inquiries across in-person, email, phone, and virtual channels
- Design and manage student feedback surveys and program evaluations in **Qualtrics**, translating collected data into actionable insights for CGE leadership
- Create student communications, newsletters, event materials, and social media content—applying visual design and UX writing principles to increase engagement
- Track applications, maintain records, and perform data entry across internal databases and **Box**, ensuring data accuracy and confidentiality
- Support onboarding communications, housing coordination, and TOEFL test administration logistics for incoming cohorts

SELECTED PROJECTS

Flow — Banking That Disappears · HCAI Case Study
Live Site · GitHub

End-to-end product design · Research, platform architecture, interaction design, Figma prototypes, React case study

- Designed **invisible financial infrastructure** for Gen Z—AI-powered banking that surfaces inside iMessage, Instagram, and Uber at the moment of decision, instead of requiring a separate app
- Architected **3 interconnected products** on a shared ML layer: Flow Split (NLP bill splitting in iMessage), Flow Safe (predictive spend nudges on lock screens), Flow Together (social savings with group accountability)
- Built cross-product intelligence design where modules hand off contextually—Safe warns about overspending, Split suggests sharing cost, Together proposes shared savings pots
- Delivered 3 interactive **Figma prototypes**, full platform architecture documentation, and a React-based case study website

Capstack — Startup Funding Discovery · UX Research Case Study
Live Demo · GitHub

UX research, persona development, journey mapping, heuristic evaluation, UI design, front-end development

- Identified "Evaluation Failure"—founders wasting **8+ hours/week** reading 50-page PDFs to assess funding fit—through secondary research, persona development, and journey mapping
- Designed **60-second eligibility cards** with personalized match scores, replacing dense documents with scannable trust signals—reducing research time to under 60 minutes
- Built a fully functional prototype with **2,400+ verified opportunities**, Kanban application tracker, investor dashboard, and admin panel using vanilla JS and localStorage
- Implemented glassmorphism UI, responsive breakpoints (900/600/380px), mobile-first bottom tab navigation, and Google OAuth integration

EDUCATION

San Francisco State University
Expected Dec 2026

Bachelor of Science, Computer Science · GPA: 3.6/4.0 · Dean's List Academic Achievement Award

CERTIFICATIONS

Google UX Design Specialization — Google, Coursera (2025) · UX Research, Wireframing, Prototyping, Usability Testing
Figma UI/UX Design Advanced — Udemy (2025) · Design Systems, Interactive Components, Advanced Prototyping

VOLUNTEERING

Student Volunteer — Cal Hacks, UC Berkeley
Oct 2024

Supported logistics and participant experience at one of the largest collegiate hackathons (hosted by MindsDB), ensuring 1,000+ participants had the tools and resources needed to build and demo projects successfully.
