SUMMARY

Product designer, Computer Science senior at San Francisco State (May 2027) and founder of INARA. I design AI products people can check, correct and trust: suggestions that explain themselves, summaries that link to their sources, and AI that leaves the final call to people. I take ideas from research and Figma to working React products. Seeking product design internships.

EXPERIENCE

INARA · Founder & Product Designer · inarahq.com — 2026 – Present

- Founded and designed an AI operations assistant for family-run motels: guest texting, live room status and staff jobs in one app. Live at inarahq.com; preparing a first pilot with a 40-room San Francisco motel.
- Designed the trust model: AI drafts each guest reply and shows why; owners approve, edit or write their own, and choose which answers send automatically.
- Designed the brand, website and a mobile-first owner app with a design system, and built them in React with an AI coding agent; Lighthouse accessibility 100, WCAG AA.
- Turned an owner's story of a failed tool, whose data didn't match the booking system, into a read-only integration principle; designed carrier-compliant consent flows for texting.

Front Office Student Assistant · Center for Global Engagement, San Francisco State University — Jan 2026 – Present

- Promoted to the front office role; first point of contact for 200+ international students in person, by email, phone and video.
- Design Qualtrics surveys and program evaluations and turn results into recommendations for leadership; write and design newsletters.

SELECTED PROJECTS

Flow · Banking inside the apps people already use · Fintech — Case study · Code

- Designed three AI money tools that appear at the moment of spending: bill splitting in iMessage, safe-to-spend nudges on the lock screen and group savings pots.
- Designed forecasts that show their math and can be corrected; delivered a 21-screen clickable prototype, architecture docs and a React case-study site.

Groundwork · Context assistant for radiologists · Healthcare AI — Case study · Prototype

- Ran a 48-question interview with a radiology resident and synthesized six insights, a persona, a request-to-report journey and six design principles.
- Designed a desktop assistant that links every summary line to its source record, flags missing and conflicting records, and declines to diagnose.
- Delivered 13 screens and states, including side-mismatch and unidentified-patient edge cases, as a clickable prototype and Figma file.

Capstack · Startup funding directory · AI redesign, human in the loop — Case study · Code

- From research, personas, a journey map and a heuristic evaluation, redesigned the directory around an AI agent that keeps listings current, with curators approving high-risk changes.
- Built an earlier JavaScript front-end with an application tracker, investor dashboard, admin panel and Google sign-in.

SKILLS

Design	Interaction design, information architecture, prototyping, design systems, brand, motion, WCAG 2.2
Research	Interviews, usability testing, heuristic evaluation, journey mapping, personas, surveys (Qualtrics, Maze)
AI product	Explainable suggestions, human-in-the-loop approval, source-linked summaries, consent states
Tools	Figma, Claude Design, Miro · React, TypeScript, JavaScript, HTML/CSS, Python, Git, Claude Code

EDUCATION

San Francisco State University · B.S. Computer Science · GPA 3.6/4.0 · Dean's List — Expected May 2027

Certifications: Human-Centered Design for AI and AI for Design Systems, IxDF Master Classes (2026) · Google UX Design Certificate, Coursera (2025) · Figma UI/UX Design Advanced, Udemy (2025)

Volunteering: Student volunteer, Cal Hacks at UC Berkeley, 1,000+ participants (2024)
